

KSC LIST OF NON-LOAD TEST SLINGS

(Last updated 9 November 2012)

This list documents those KSC slings and rigging that do not require periodic load testing per NASA-STD-8719.9, Standard for Lifting Devices and Equipment, and KNPR 8715.3, KSC Safety Practices Procedural Requirements.

KNPR 8715.3 specific requirements: Program/project or directorate organizations having design, procurement, operations, and maintenance of lifting equipment slings are responsible for submitting requests for changes to the LDEM, with rationale, to the list of non-load test slings. The LDEM will approve/disapprove changes to the list. Requests for additions to the list shall state why the periodic load test will not be performed and should include the following:

1. Design standard(s).
2. Design safety factor(s).
3. Rated load versus actual load.
4. Test history.
5. Operations history.
6. Planned future use.
7. Material/construction properties.
8. Storage provisions.
9. Maintenance performed.
10. Other information that is acceptance rationale to not perform the periodic load test.
